Introduction

AP EasyPower is a smart home energy management tool that provides local and remote management services for devices.

- Plug-and-Play, fast installation and wiring
- Direct connecting with Bluetooth
- Real-time monitoring
- Online diagnosis & maintenance

1. Install and Use AP EasyPower

1.1 Install

iOS:

- Go to App Store
- Search “AP EasyPower”
- Download and install

Note

iOS: 10.0 and up

Android:

- Go to Google Play Store
- Search “AP EasyPower”
- Download and install

Note

Android: 7.0 and up

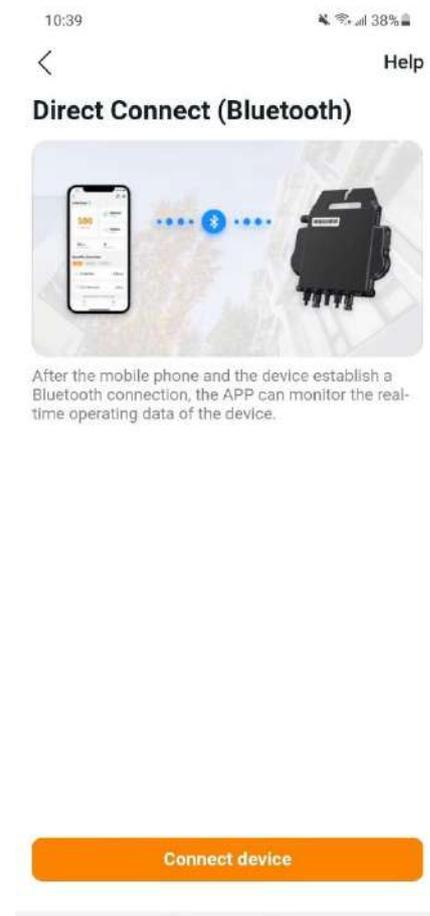

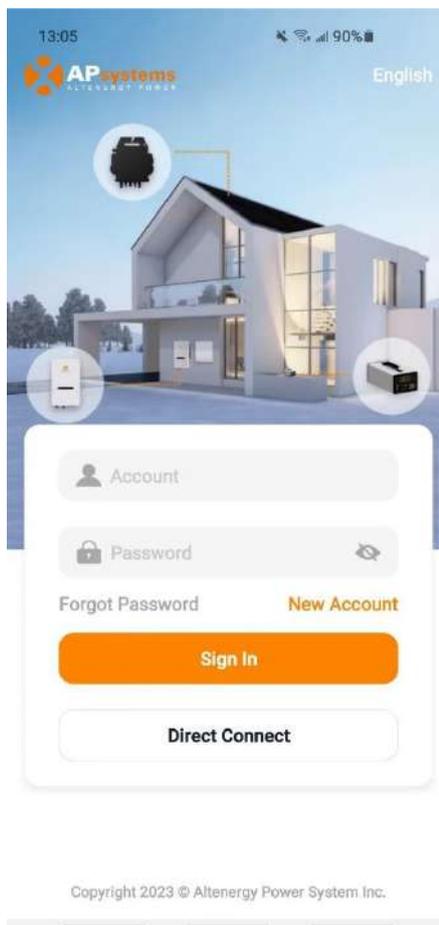

1. Install and Use AP EasyPower

1.2 Direct Connect Mode

- Click “Direct Connect”.

A guiding page is displayed.

- Click “Start”.

1. Install and Use AP EasyPower

Once you have directly connected a device, the next time you click “Direct Connect”, a device page will be displayed, including the devices directly connected before and the Bluetooth’s signal of each device. You can click the device to connect exist devices easily, and click “Connect New Device” to connect a new one.

Note

- When connecting, please ensure that the device is running and keep the phone's Bluetooth turned on
- If the distance between the phone and the device is too far or there are obstacles, which may cause connection failure, please try to keep the phone close enough to the device.

1. Install and Use AP EasyPower

1.3 Remote Mode

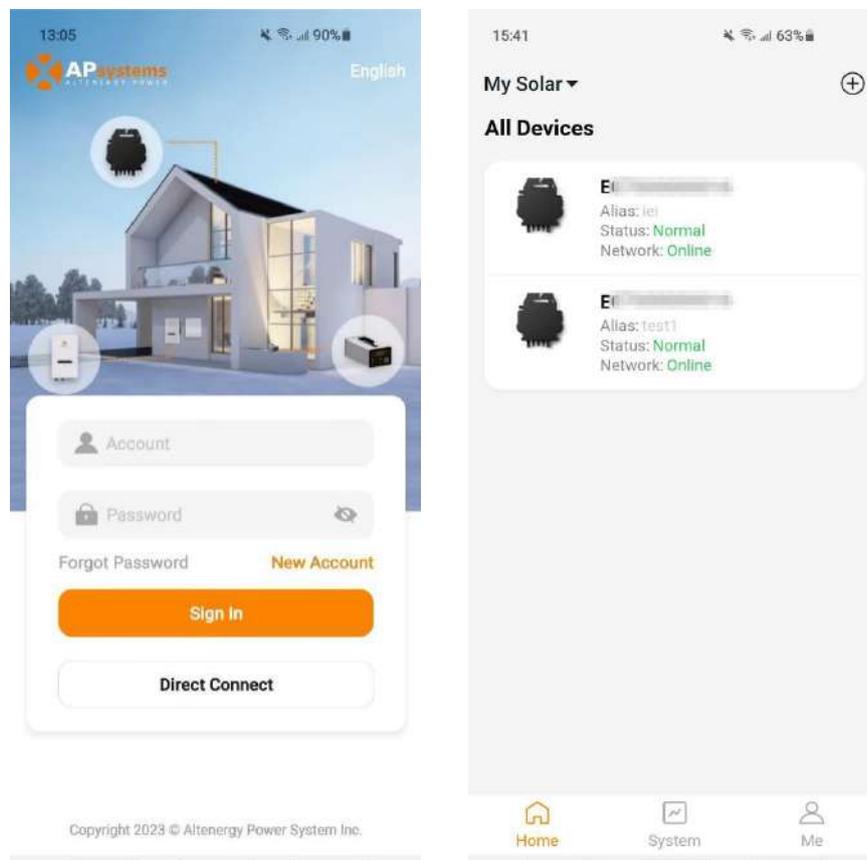

- Enter your “Account” and “Password”.

Note

Use Account and Password. The Password is case sensitive.

- Press the “Sign in” button.

On the home page, a list of your installed device is displayed

Note

- If no installation is registered, the list will be empty.
- If you need to switch the language, click the “English” at the upper right corner and select language of your choice.

2.Connect (*Direct Connect Mode*)

There are two (2) steps involved in connecting a new device for Direct Connect. All the following introductions take the customer as an example.

Step 1: Connect the device

Step 2: Select the Wi-Fi (Optional)

2.1 Step 1, Connect the device

There are two (2) methods to connect a device.

Method 1: [**Scan**], scan the bar code of the inverter id to connect.

Method 2: [**Bluetooth**], select the device in Bluetooth searching list to connect.

2.1.1 Method 1, [**Scan**] – Recommended

On the scanning page, a scan box is displayed. Scan the inverter ID to connect.

2.Connect (*Direct Connect Mode*)

Note

Each device has a unique ID (length: 12) which is located on the front of the device, as well as on the back flap of the device's shipping box.

2.1.2 Method 2, [*Bluetooth*]

On the Bluetooth page, a device list is displayed. Select the device to connect.

Note

The Bluetooth alias of the device has with the same ending serial number of the device ID.

2.Connect (*Direct Connect Mode*)

2.2 Step 2, Select the Wi-Fi (Optional)

Select the Wi-Fi to connect, and the device can get the remote services.

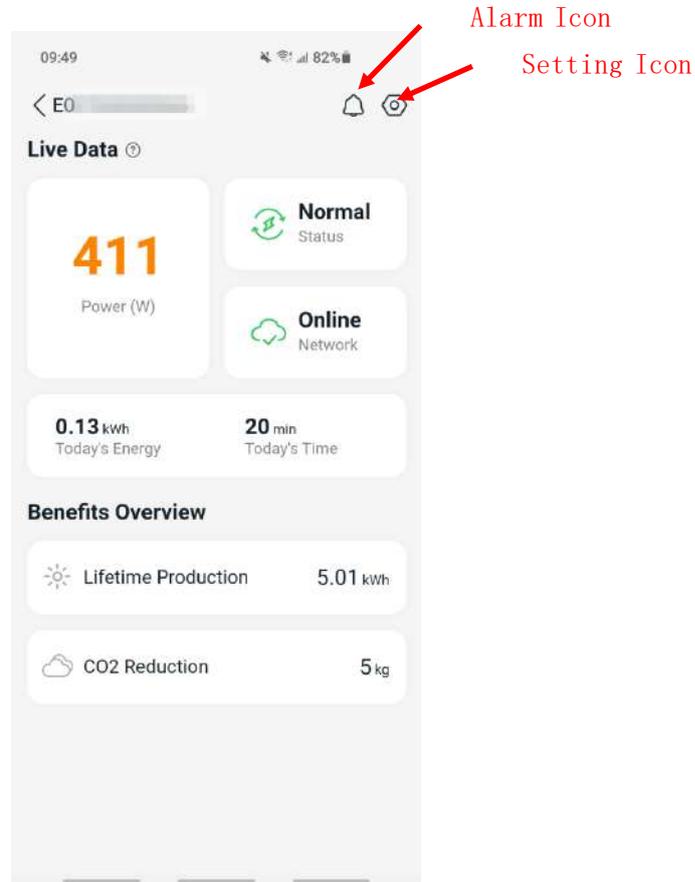

Note

If the device currently cannot set up the Wi-Fi, you can skip this time. If the device does not need the remote services, you can skip it forever, if you want it in the future, go to setting page to set it.

3. Monitor & Control (*Direct Connect Mode*)

3.1 Main (*Direct Connect Mode*)

On this page, user can visualize

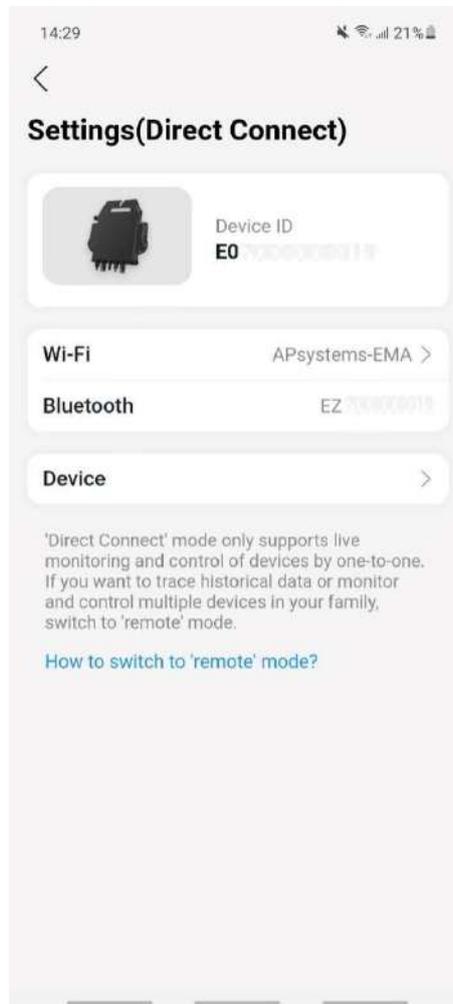

- **Live Data:** The real-time data of the device in current round, including the power, energy, running time, working status and the cloud status.
 - Working status
 - Normal:** The device is working normally.
 - Alarm:** The device has alarms and you need to check it.
 - Network status
 - Online:** The device is connecting the cloud service through the internet.
 - Offline:** The device is not connecting the cloud service through the internet, maybe the device is not connected the Wi-Fi or the router is down.
- **Benefits Overview:** The lifetime energy produced by the device and the equivalent CO2 reduction.

By pressing "**alarm icon**" to check the alarm information if the device status is alarm.

By pressing "**setting icon**" to set the device. The setting page is shown below.

3. Monitor & Control (*Direct Connect Mode*)

3.2 Settings (Direct Connect Mode)

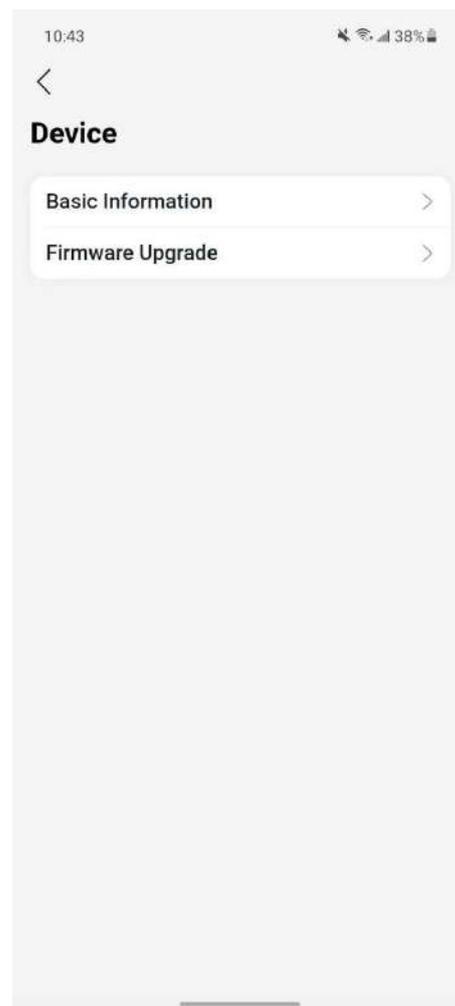

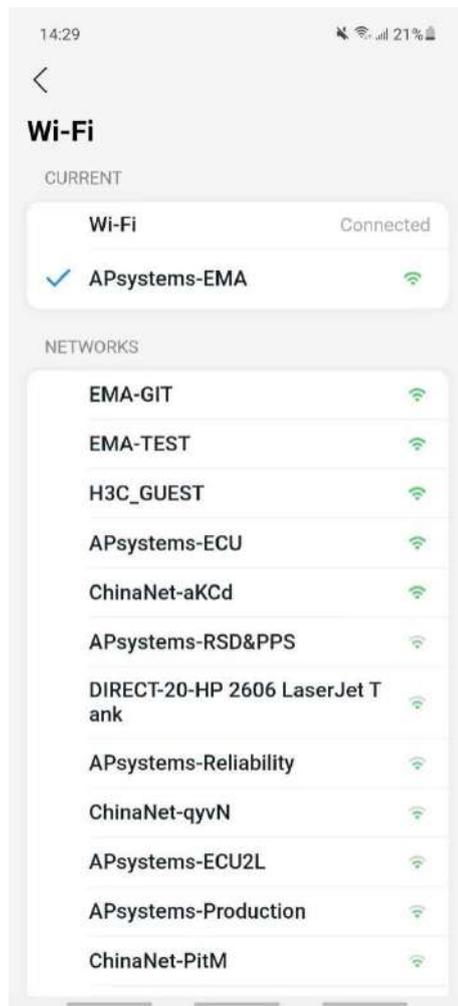

On the setting page, user can visualize

- **Device ID:** The serial ID of the device
- **Wi-Fi:** The Wi-Fi Name device connected. If the device does not connect the Wi-Fi, it will show “Not Connected”. Click it to enter the Set Wi-Fi page to switch Wi-Fi.
- **Bluetooth:** The Bluetooth name of the device
- **Device:** The details information and operations of the device, user can get the serial ID and mac address, upgrade the software.

Note

Click “How to switch to ‘remote’ mode” if you want to register an account and monitor your device wherever you are.

3. Monitor & Control (*Direct Connect Mode*)

4. Register (*Remote Mode*)

There are two (2) major steps involved in adding a new installation (registering) in the AP EasyPower. All the following introductions take the customer as an example.

Step 1: Register Account - Entering the user's personal information.

Step 2: Link Device - Configuring the device information.

4.1 Step1, Register Account

➤ Click "New Account"

A check list of information is displayed. Fill in all the information and get your own account.

The image displays two screenshots of the AP EasyPower mobile application interface. The left screenshot shows the 'Sign in' screen with a 'New Account' link. The right screenshot shows the 'Register' form with various input fields and checkboxes. A red arrow points from the 'New Account' link in the left screenshot to the 'Register' form in the right screenshot.

Sign in Screen (Left):

- Time: 14:25
- Language: English
- Account input field
- Password input field (with eye icon)
- Forgot password link
- New Account link
- Sign in button
- Direct Connect button
- Copyright 2023 © Altenergy Power System Inc.
